

Cover Letter

My path into IT began in (early 2000) design — first in print, helping my father's pyrography craft, and later in 2002 when I built my first HTML site to showcase [Bowers & Wilkins'](#) flagship model, the [Nautilus](#) speaker. That curiosity grew into a 25-year career in product management and design, spanning healthcare, automotive, power, and government in both SaaS and development as a service. Along the way, I've shipped complex systems, optimized processes, and led teams across Europe, North America, Australia and Asia.

I believe in products that last. Whether upgrading Singapore's national blood bank system, designing automotive safety solutions for Honda and Renault, or managing Ontario Power Generation's software portfolio, my focus has been the same: disciplined execution, clear requirements, and quality that compounds over time. Experienced both in SaaS and outsourcing.

I'm calm under pressure, driven by structure, and always looking for ways to turn a vision into something real. I'd welcome the chance to bring that mindset to your team and contribute to building products that matter. Open for contractual or B2B engagement.

Thank you for your time.
